

BIM POLICY STATEMENT

William Dyer Electrical UK Ltd are committed to delivering the highest possible standard of work to our immediate clients and the wider project team. We use a combination of innovative thinking, new principles, and established best practice with the aim of meeting or exceeding our clients' expectations, and adding value to the projects we work on.

This includes the use of Building Information Modelling (BIM), as defined in PAS 2192-2:2013: Building Information Modelling (BIM): process of designing, constructing or operating a building or infrastructure asset using electronic object-oriented information.

We Will:

- i) Discuss from the outset, and throughout our involvement, the potential benefits of BIM to our client, suppliers, and the wider project members, where appropriate on a project-by-project basis.
- ii) Implement, as minimum, the mandated level of BIM on each project, but promote further levels where we identify potential benefits.
- iii) Undertake all work in accordance with our Quality Management System in order to ensure that data we provide is accurate, appropriate and unambiguous.
- iv) Collaborate with all members of our project team to promote the holistic approach to data and information management which is pivotal to the efficient delivery of projects and facilities.
- v) Continue to invest in resourcing and training our staff with the necessary software, knowledge and expertise to deliver BIM on each project we work on.
- vi) Continually review our BIM implementation, modifying our working practices and standardised process where required, to carry our experiences from the past to our future projects.
